

# GENIOPLAST® PE50S08 AH

## Siliconadditive

GENIOPLAST® PE50S08 AH is a pelletized masterbatch formulation. GENIOPLAST® PE50S08 AH contains 50 % of a non-reactive, ultra-high molecular weight silicone gum, dispersed in polyethylene homopolymer. Designed specifically as an additive to improve the processing and performance profile in polyethylene based compounds. This product is available as standard granules.

## Properties

In a typical PE compound formulation GENIOPLAST® PE50S08 AH is used at a loading between 1 and 3 weight %. Main benefits for polyethylene applications (film, white goods, automotive and recycled compounds) comprise improvement of processing, scratch and mar performance, reduction of coefficient of friction, improvement of surface aspects (soft touch, not sticky, not blooming). GENIOPLAST® PE50S08 AH is odorless and not contributing to fogging.

In contrary to amides and other fatty acids GENIOPLAST® PE50S08 AH does not migrate and bloom outside the interior part and therefore not contribute to fogging and to stickiness. At the recommended use levels (1 - 3 %), GENIOPLAST® PE50S08 AH does not negatively impact the thermo-mechanical properties of the compounds.

# Technical data

## General Characteristics

Property	Condition	Value	Method
Appearance	-	white pellets	-
Organic matrix resin	-	LDPE	-
Silicone-Content	-	50 %	-
Suggested use level	-	1 - 3 %	-

All the information provided is in accordance with the present state of our knowledge. Nonetheless, we disclaim any warranty or liability whatsoever and reserve the right, at any time, to effect technical alterations. The information provided, as well as the product's fitness for an intended application, should be checked by the buyer in preliminary trials. Contractual terms and conditions always take precedence. This disclaimer of warranty and liability also applies particularly in foreign countries with respect to third parties' rights.

## Applications

- Plastic Additives
- Thermoplastics & Elastomers

## Application details

Polyethylene based compounds for film, cables, white goods, recycled and automotive applications.

GENIOPLAST® PE50S08 AH is a compounding additive. Compounding is required to achieve the proper rheology for the migration of the silicone constituent to the surface during the melt phase. After processing and cooling the part, the ultra-high molecular weight silicone constituent is fixed in the PE compound, as well as the surface, assuring stable performance over time. GENIOPLAST® PE50S08 AH is compatible with all PE grades (homopolymer or copolymer), pigments, as well as mineral fillers such as talc or calcium carbonate.

## Packaging and storage

### Packaging

20 KG bag

### Storage

The 'Best use before end' date of each batch is shown on the product label. Storage beyond the date specified on the label does not necessarily mean that the product is no longer usable. In this case however, the properties required for the intended use must be checked for quality assurance reasons.
